                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 5131, Application US/09543681A

Patent No. 6665709

GENERAL INFORMATION:
APPLICANT: GARY BRETON

TITLE OF INVENTION: DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: DIAGNOSTICS AND THERAPEUTICS

CURRENT APPLICATION NUMBER: US/09/543,681A

CURRENT PILING DATE: 2000-04-05

PRIOR APPLICATION NUMBER: US 60/128,706

PRIOR FILING DATE: 1999-04-09

NUMBER OF SEQ ID NOS: 8344

SEQ ID NO 5131
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   TITLE OF INVENTION:

Submitted (21-12/0G-1997) The Institute for Genomic Research, 9712

Medical Center Dr., Rockville, MD 20850, USA

BAC clone CIT987SK-9998 is located in band 12p15 of chromosome 12.

Genes were identified by a combination of five methods: XGRAIL

Genes were identified by a combination of five methods: XGRAIL

(available by anonymous ftp from arthur.epm.ornl.gov), Genefinder

(available by anonymous ftp from colin@u.washington.edu), GENSCAN

(available using the e-mail server at genscan@gnomic.stanford.edu),

searches of the EST database at TIGR

(http://www.tigr.org/fdb/ndc/hcd.html) and searches against a

peptide database. Repeats were identified using RepeatMasker (Smit,

A.F.A. and Green, P. unpublished,

Direct Submission
Submitted (31-JUL-2002) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On Oct 23, 2001 this sequence version replaced gi:16304255.
INFORMATION: http://www.hgsc.bcm.tmc.edu/ or email gc-help@bcm.tmc.edu CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the

ANNOTATION OF FEATURES:
SISS are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.
Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

repeat\_region

repeat\_region

repeat\_region

Genes and Region of sequence similarity are identified by Bi (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to test and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found

http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html.

in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shorgun sequence reads. Both end sequences and whole genome shorgun sequence only contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      * NOTE: Estimated insert size may differ from sequence length

(see http://www.ngsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a "working draft' sequence. It currently

* consists of 3 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.

The invention describes a method of diagnosing breast cancer in subject comprising contacting biological sample from subject with at least two different breast cancer-associated polypeptides (I) encoded by nucleic acid molecules (II) comprising sequence chosen from 42 fully defined sequences as given in specification, determining specific binding between (I) and agents in sample, where presence of the binding is diagnostic for breast cancer. The method is useful for diagnosing breast cancer in a subject. The sample is blood, lymph node fluid or breast discharge fluid. This sequence encodes a breast cancer antigen. SEQ ID NO 27; 173pp; English.

Fang YT, Liu C, Drmanac RT;

WPI; 2001-457740/49. P-PSDB; ABB11822 Human proteins and DNA encoding sequences useful for preventing, treating or ameliorating a medical condition in a mammalian subject e.g. arthritis and cancer

Claim 1; Page 748; 1963pp; English.

Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA0925-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant bost cells comprising a nucleotide of the invention, methods of producing the nucleotides of antibodies against the polypeptides, methods of deetering the nucleotides or polypeptides in a sample, and methods of identifying compounds which bind to polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence of potential therapeutic applications. The polypeptides of the invention may have various activities; sincluding cytokine, cell proliferation or cell differentiation activities; sincluding cytokine, cell proliferation or cell and methodochesis regulacory activity; issue growth activity; and immunomodulatory activity; activit or inhibin-related activities immunomodulatory activity; activit or iliginal activities; or chemokinetic activities, preceptor or ligand activities or thrombolytic activities; receptor or ligand activities or thrombolytic activities, receptor or ligand activities or thrombolytic activities, receptor or ligand activities or may be involved in oncogenesis, cancer cell proliferation or metastasis.

Conditions, e.g., by protein or gene therapy. Such conditions include cancers, hematopoletic disorders (e.g., asthma or arthritis), arthering or that is the encopal activities or and include and cancers, hematopoletic disorders (e.g., asthma or arthritis), arterial ischaemia, bone disorders (e.g., asthma or arthritis), arterial ischaemia, bone disorders (e.g., asthma or arthritis), arterial ischaemia, bone disorders (e.g., osteoporosis), and abnormal companies, or burgeting and thursh factor activity may be used to promote wound changed with growth factor activity may be used to perundent or cell growth activities may be used in the treatment of viral, barterial and fungal infections in addition to immunomodulatory activities ma novel human polypeptide of the invention

                      The invention relates to a method for diagnosing a disorder characterised by expression of a human cancer associated antigen precursor coded for by a mucleic acid molecule (NAM). The method comprises: (a) contacting a biological sample isolated from a subject with an agent that specifically binds to the NAM, an expression product or a fragment of an expression product complexed with an HLA molecule; and (b) determining the interaction between the agent and the NAM or the expression product as a determination of the disorder. The products and methods can be used in the diagnosis, monitoring, research, or treatment of conditions. The invention provides nucleic acid sequences and encoded polypeptides which are cancer associated antigen precursors expressed in human breast cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               479 AAACGIGACICAGIAAAAIGGCACIACCICIGCCIGCGACGCIAIGGCIAIGACICGAAI

The invention relates to an isolated polymuclectide comprising any one of 38043 cDNA sequences, appearing as ACH12789-ACH50811, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also included is a purified polypeptide comprising a sequence corresponding to a reading frame of the novel polymuclectide. The nucleic acid sequences corresponding to a reading frame of the novel polymuclectide. The nucleic acid sequences corresponding to a reading frame of the novel polymuclectide. The nucleic acid sequences controlly in diagnostics as expressed sequence tags (BST) for incremsion, in assessing biodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA. The purified polypeptide is one of the 38043 isolated cDNA/BST sequences. Note: The sequence data for this patent did not form part of the printed specification, but was constant and incertly from USPTO at the control of the control of the control of the control of the patent did not form part of the printed specification, but was constant control of the control of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                   New polymucleotide sequences obtained from various cDNA libraries, useful as hybridization probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                IleAsnValValGluGluProVal---ValGluArgAsnAsnHisGlnThrGluLeuGlu 118
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    60 AsnleuPheSerPheGluSerGlyArgArgCysGlnThrGlyGlnGlyIlePheAlaPhe

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                225
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               226 TCCTTCGAAGCAGGACGTAGGTGTATGTCTGGGCCAGGGATCTACACGTTTCGAGTCCAC 285
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  42
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 62
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-AB130511), expressed DNA sequences (ABL16175) and the encoded proteins (ABB27373-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell interactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               7 HisArgAsnLysPheLysVal-----IleAsnValAspAspAspGlyAsnGlu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher enkaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from NIPO at ftp.wipo.int/pub/published_pct_sequences

```
mammalian cells after stimulation with a ligand for a receptor tyrosine kinase found in oncogenic cells. The p62-dok protein binds p120 ras GTPase-activating protein (GAP). The p62-dok protein is involved in a signal transduction pathway initiated by receptor tyrosine kinase, and is rapidly tyrosine phosphorylated. The p62-dok protein is also present in rormal cells, but is not constitutevily phosphorylated by normal receptor tyrosine kinase. Antibodies against p62-dok and aberrantly phosphorylated p62-dok, and probes derived from the p62-dok and aberrantly phosphorylated p62-dok, and probes derived from the p62-dok bNA sequence can be used in the diagnosis and treatment of conditions in which an oncogenic tyrosine

```

The present invention describes a predictor set comprising a plurality of polynucleotides or polypeptides whose expression pattern is predictive of the response of cells to treatment with a compound that modulates protein tyrosine kinase activity or members of the protein tyrosine kinase activity or members of the protein tyrosine kinase activity of cells, comprising obtaining a sample of cells, additional the activity of cells, comprising obtaining a sample of cells, comprising obtaining a sample of cells, comprising obtaining a sample of cells, correlating the activity of the cells, comprising obtaining a sample of cells, correlating the expression of the markers to the compound's ability to correlate the activity of the cells, (2) a plurality of cell lines for correlate with compound sensitivity or resistance of cells associated with a disease state, comprising subjecting the plurality of associated with a disease state, comprising subjecting the plurality or cell lines to one or more compounds, analysing the expression pattern of cells associated with a disease state by using the compounds or polypeptides and selecting cells associated with a disease state of cells associated with a disease state by using the expression pattern of the microarray. The polymucleotides and cells associated with a disease state by using the expression pattern of the microarray. The polymucleotides and cells associated with protein tyrosine kinase pathways. These may be used in determining drug cutvity of compounds that interact with protein tyrosine kinase pathways. These may be used in determining drug centry by or protein tyrosine kinase pathways. These may be used in determining drug enerty profiles which aid in treating diseases and disorders (e.g. centrality ty in patient response at a molecular level. The present invention.

```
The invention relates to an isolated polypeptide that comprises a sequence with 60 % sequence identity to one of 103 prostate specific colly prostate specific colly polypeptide (PSP) sequences (S1), given in specification, or a sequence concoded by a nucleic acid comprising one of 114 prostate specific nucleic acid (PSNA) sequences (S2), given in specification. Also included are a vector comprising the PSNA, a host cell comprising the vector.

CC acid (PSNA) sequences (S2), given in specification. Also included are a vector comprising the PSNA, a host cell comprising the vector.

CC ancer or presence of cancer in a patient, comprising a unit for an a vaccine comprising the PSP or the PSNA, the PSNA, in a sample of a patient of a prostate specific nucleic acid (PSNA) in a cample. The antibody to the PSP or the PSNA, the PSNA is useful for amplied the presence of a prostate specific nucleic acid (PSNA) in a cample. The antibody to the PSP is useful for determining the presence of a prostate cancer, where the administration of the capting a patient with prostate cancer, where the administration of the antibody induces an immune response against the prostate cancer cell cancer in a patient. The PSP is useful as a vaccine component of useful for diagnosing and monitoring the presence and metastases of prostate cancer in a patient. The PSP is useful as a vaccine component of celliciting a humoral and/or cellular immune response, and for producing transgenic animals and cells, and for producing ransgenic animals and cells, and for producing prostate cancer by detecting genetic lesions or mutations. The PSP and the PSNA are useful for staging and prostate tissue for treatment and research. The PSNA is useful for staging and prostate cancer. The PSP and the PSNA are also useful for staging and prostate tissue, and thus is useful in forensic science, contenting prostate tissue, and the antibody are useful in dispension of the prostate cancer. The PSP and the PSNA are useful for detecting prostate call differentiation and

It is an example of claimed isolated nucleic acids (see AA294077-Z9413) that are specifically expressed in hematopoietic stem cells (HSCs) and which encode HSC-specific proteins. The HSCs are especially primitive HSCs (PHSCS) such as umbilical cord cells, bone marrow cells and foetal liver cells. The encoded proteins (see AAY9176-93) are growth factors, transcription factors, splicing factors, capping factors, transport proteins, translation factors or replication factors that modulate HSC
suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating or suppressing activity, haemetopolesis regulating activity, tissue growth activity, activin/inhibin activity, chemotactic/chemokinetic activity, haemetopolesis receptor/ligand activity, animital activity, chemotactic/chemokinetic activity, inflammatory activity, cabherin/tumour invesion suppressor activity, tumour inhibition activity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GluProvalvalGluArgAsnAsnHisGlnThrGluLeuGluValProArgThrProArg 124
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               activity, especially differentiation or replication. The invention provides a claimed method for identifying PHSC-specific nucleic acids linvolvings: creating a PHSC cDNA library and a non-PHSC immune cell library; and subtracting the 2 libraries. Also claimed are methods for generating a stem cell/progenitor cell from PHSCs; for identifying the presence of a PHSC in a sample; for identifying the presence in a sample of a compound that modulates HSC activity; for using such a compound to treat an immune system condition, especially leukaemia; for introducing exceptanous nucleic acid into a HSC; and for ex vivo expansion of HSCs. Also claimed is a PHSC specifically expressing 1 of the claimed nucleic acids, such as the present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                           82

The present sequence is that of a nucleic acid isolated from mouse primitive stem cells by a method of the invention. It is an example of claimed isolated nucleic acids (see AAZ94077-234131) that are example of specifically expressed in haematopoietic stem cells (HSCs) and which encoded HSC-specific proteins. The HSCs are especially primitive HSCs (FHSCs) such as umbilical cord cells, bone marrow cells and foetal liver cells. The encoded proteins (see AAY9176-93) are growth factors, transport transcription factors of replication factors, transport corpreties, translation factors or replication factors, transport corprisitly, especially differentiation or replication. The invention provides a claimed method for identifying PHSC specific nucleic acids involving: creating a PHSC cDNA library and a non-PHSC immune cell involving: creating a PHSC cDNA library and a non-PHSC immune cell presence of a PHSC in a sample; for identifying the presence of a PHSC in a sample; for identifying the presence of a PHSC in a sample cof a compound that modulates HSC activity; for using such a compound to treat an immune system condition, especially leukaemia; for introducing exogenous nucleic acid into a HSC; and for ex vivo expansion of HSCs; and series condition, as the presence and a compound that may a presence of a HSC specifically expressing 1 of the claimed nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GluProValValGluArgAsnAsnHisGlnThrGluLeuGluValProArgThrProArg 124
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ---TCCAAGCCCCAG 715

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   g
immunosuppressant and cytostatic activity. The polynucleotides are useful immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system diseases, and and central nervous system diseases, and a lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as immune system suppression utilisation of the activities such as:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Wang D;

XX Che invention relates to human nucleic acids (AA157798-AA161369) and the concompled polypeptides (AAM5842-AAM4213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide or frem the invention may be used to treat diseases of the peripheral nervous cc of the invention may be used to treat diseases of the peripheral nervous system diseases, such as system; such as peripheral nervous injuries, peripheral nervous cc of the invention and shy-Drager Syndrome Other uses include the cc lateral sclerosis, and Shy-Drager Syndrome Other uses include the cc utilisation of the activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and cc Ns disorders. Note: The sequence data for this patent did not form XX Squence 1123 BP; 337 A; 254 C; 283 G; 249 T; 0 U; 0 Other;

/clone_lib="whole_proper resistant, was constructed according
Site 2: Not I; The library was constructed according
Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarcs
gel. First strand cDNA synthesis was primed with oligo-dT
primer contening a Not I site. Double strand cDNA was
size selected according to mRNA size fraction, ligated
with EcoR I adaptor, digested with NotI and then cloned
directionally into pYX-Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is TGAGAGAGCC. This library was created for the University
lows Brain Anatomy Project (BMAP): 'Gene Discovery in the
Developing Mouse Nervous System', supported by National
Institute of Mental Health (NIMM), Hemin Chin, Ph.D.,
program coordinator."
